SUMMARY

Software Engineer focused on scalable backend systems. Led development of an end-to-end multi-outlet ERP with an integrated CRM, plus event-driven services and AI-powered platforms shipped to production. Experienced across the full SDLC on live products. Strong in Python, FastAPI, and PostgreSQL with solid DevOps practice, seeking a backend/software engineering role to build secure, scalable, and impactful applications.

WORK EXPERIENCE

Software Development Engineer - Silo Fortune, Bengaluru

Dec 2025 - Present

Silo ERP - Multi-Outlet Inventory & CRM Platform | *FastAPI, async PostgreSQL, Alembic, Docker*

- Owned the Silo ERP platform end-to-end as sole engineer, authoring **~90% of all commits** and taking it from a blank repo to a live production system running daily outlet operations across multiple regions.
- Automated lead capture end-to-end via Facebook Lead Ads webhooks, eliminating **100% of manual lead entry** and driving a **~40% lead-to-order conversion rate** with real-time stock reservation and full activity tracing.
- Built a pincode-aware, real-time inventory engine covering **100% of outlets**, replacing manual stock reconciliation with automated audits, inter-outlet transfers, and live rate-card management.
- Integrated Exotel telephony and SmartPing dispatch to **fully automate rider assignment and delivery handovers**, cutting manual dispatch coordination to zero.
- Engineered RBAC and token-based auth securing **100% of platform endpoints**, backed by a continuously-versioned migration history and an extensive automated test suite — shipped via Docker with zero manual deploy steps.
- Designed and built the companion React frontend, unifying **100% of outlet operations** — inventory, orders, payouts, and CRM — into one real-time dashboard for managers and agencies.

Kissan Sampurna | *FastAPI, PostgreSQL, Python*

- Built a Farm Advisory module on FastAPI/PostgreSQL, delivering data-driven land-health monitoring and real-time crop-growth tracking to help farmers make scientific crop choices.
- Designed a subscription and usage-management service with plan-management and usage-enforcement APIs, unlocking premium-feature gating and platform monetization.

SDE Intern - Silo Fortune, Bengaluru

Aug 2025 - Dec 2025

- Built **Haatak**'s 'My Wealth' API service on FastAPI, giving users real-time visibility into their gold holdings and investment growth on a digital gold-investment platform.
- Designed **JameendarX**, an end-to-end real-estate platform, digitizing listing workflows, sales pipelines, and customer-lifecycle management.
- Integrated the Cashfree gateway and engineered a custom installment engine with schedule restructuring, enabling flexible customer payment plans.
- Implemented role-based access control (RBAC) and secure authentication, securing platform access in line with data-protection standards.

SKILLS

Languages Python, JavaScript, Java, SQL

Backend FastAPI, Node.js, REST APIs, SQLAlchemy, Alembic, async PostgreSQL, Redis

Frontend React, HTML5, CSS3, Tailwind

DevOps & Tools Docker, AWS, Git, CI/CD, PostgreSQL, MySQL, SQLite

PROJECTS

Forestry e-Filing Agent | *TypeScript*

- Built an AI agent that automates government forestry-department form filling end-to-end, cutting manual paperwork.

AuditCode - Code Editor & AI Assistant | *Python*

- Engineered an in-editor AI assistant (Ollama) for contextual conversations and coding problem-solving, streamlining the teaching-learning workflow.

EDUCATION

B.E., Computer Science & Engineering - Govt. Engineering College, Hassan (CGPA 7.9)	2025
